MEMORANDUM FOR: Deputy Director for Support

SUBJECT : Coordination of Antenna System Requirements at Headquarters

REFERENCE : Your Memo, DDS 67-4926, dated 2 October 1967, Same Subject

1. The following is a summary of the action taken in response to your memorandum which requested that the Directors of Communications, Logistics and Security review the installation and utilization of antennas on the Langley Building.

2. A Working Group was formed consisting of representatives from the three offices. This Group began by making surveys and identifying the sponsor of all antennas presently installed on the roof.

3. Each sponsor of the antennas has been questioned to determine if he is using the antenna, and whether or not he contemplates any change in his requirements. Most of these responses have been received and are under review. Antennas which are no longer in use have been removed.

4. The Offices of Security and Communications have developed security parameters which will provide security safeguards for the distribution system. The Office of Communications, Engineering Staff, has been tasked with developing a master antenna and signal distribution plan. Low Priority

5. We have received no new requirements for television and radio antennas and have no indication that there will be many requests. However, there is now established a procedure for handling any requirements that may arise, and we will be prepared to make secure and professional installations.
